

Testimonials algonix - doctors:

**Dr. med. Winfried Nowack,
Director of the Olympic sports base in Leipzig, Germany:**

„The equipment unit “algonix” is being employed for physiotherapy between 2.5 to 4.5 hours every day, hence it has become the most frequent used piece of equipment.

In cases of acute injuries, such as haematoma, distortions and damages through overstraining (muscular) the treatment with algonix produced good results. In cases of prior injuries or chronic disorders the treatment took longer to reach a successful outcome.

We discovered that the time needed for treating ruptured muscle fibres and strains reduces to nearly half compared to conventional methods. In one case, for example, a calf returned to its full strength 3 weeks after a torn muscle fibre.

The program „Sweep 10“ produced very good results in cases of muscular tensions. Inflammatory processes, for example at the Achilles’ tendon, are treated with the program „Reduction of Inflammatory Process“. In cases of acute pain of the lumbar spine, neural disturbances and blockages the program „Polarization of the Nerves“ + G1 proved its effectiveness.“

E.O. Ospedali Galliera hospital, Genova, Italy:

„It may be the best treatment for many pain-related disorders, providing fast relief of symptoms and quickly promoting healing.“

**Dr. Matthias Purfürst, anesthesiologist, Cottbus, Germany,
about treating Sudeck’s syndrome with algonix:**

„Characteristics are noticeable pain reduction, improvement of motor activity and reduction of edemas. Thus algonix has a high therapeutic significance.“

**Prof. Ricciardi Pasquale Marizio,
Center of sports medicine, Rome, Italy:**

„The low percentage of negative results leads us to believe that this new therapeutic method is a highly effective instrument in any case of painful pathology.“

Dr. Tito Santarelli, Rome, Italy:

“The algonix will revolutionize modern medicine.”
